This video serves as a testimony of the work that we carry out, what we represent now and the idea we have about what is involved with living with hemophilia.

Art, Alex, Sergi, Isidre, Felipe, and other people from our community explain their own experiences.

These different experiences are very valuable because, in fact, with or without hemophilia, **each human deals with the task of building a life**, giving it sense, recognising certain limits.

The **Catalan Association of Hemophilia**, whose area of influence is Catalonia, was founded in 1976 and attends approximately 1.000 members.

We could explain many stories about these years dedicated to the care and attention of hemophiliacs and their families, because **our principal aim is to accompany, assess and attend the community** along the path that starts once hemophilia is diagnosed.

These testimonies show the effort made by the Association **to prevent people** who have hemophilia **from focusing their life exclusively towards medical care**.

For this reason, the Association offers a **wide range of different attention programmes**, because it is not only about taking care of a body with a chronic disease, but rather it concentrates on the person's general health.

All the proposals and services offered by the Association are designed **to provide hemophiliacs with experiences that allow them to build their own personal experience of hemophilia**.

The **close collaboration** between the Association and the **Hemophilia Unit of Vall d'Hebron Hospital** is fundamental for understanding how it has been possible to offer this integral service to hemophiliacs.

We can show in a dynamic, engaging and participatory video how we want to continue working in collaboration, all together, to guarantee a positive present moment and to build a better future and **the spirit that makes the Association unique, just like all the people who form part of it!**
